SPORTING/TACTICAL RIFLE

DPMS Panther Arms, an industry leader in quality AR-style rifles, has followed up on the success of their affordable 5.56x45mm Panther Sportical by introducing a big-bore version, the 7.62 NATO Panther Sportical. Described by the makers as "bridging the gap between the sporting and tactical markets," this lightweight rifle has a 16-inch chrome-moly steel heavy barrel, a slick-side upper receiver and carbine-length Glacier Guards. The aluminum upper and lower receivers are given a mil-spec hard-coat anodizing. Other features include a semi-auto trigger group, an integral trigger guard, an A-2 pistol grip and a Pardus six-position telescoping carbine stock. Each rifle

comes with two 20-round steel magazines, a cleaning kit and a hard case for storage. For information on DPMS' full product line, contact DPMS Firearms LLC, Dept. GW, 3312 12th St. SE, Saint Cloud, MN 56304; (320) 258-4449; www.dpmsinc.com.

CONCEALMENT HOLSTER

An IWB holster that can be concealed under a shirt, the DeSantis M24 Tuck-This II is built from heavily padded 1050D Black Ballistic Nylon and lined with slick pack cloth. It features a belt tab that permits the shirt to be tucked over the holster and gun, with only a small portion of the belt hook being visible. This tab is widely adjustable, permitting both crossdraw and FBI-style strong-side carry and all intermediate positions. It is currently made for most concealable handguns. Those made for autoloaders have an integral magazine pouch, as shown. Information on DeSantis' extensive line of carry gear can be obtained from DeSantis Holster & Leather Goods Co., Dept. GW, 431 Bayview Ave., Amityville, NY 11701; (631) 841-6300; www.desantisholster.com.

NIGHT-VISION RIFLESCOPES

American Technologies Network Corp., (ATN) has introduced the ATN MARS night-vision sights in 4X and 6X versions. Both use a new ATN proprietary feature that permits the user to select the reticle color (red or amber) depending on conditions. Both also use third-generation ITT Pinnacle Image Intensifier tubes for superior performance in

highlight or light-polluted areas. These scopes are milled from solid aluminum billets and fitted with titanium inserts, and consequently are compact, rugged and lightweight. The scopes are nitrogen purged and feature top-quality optics with a mil-dot reticle. Other features include a low-battery indicator, a digital remote control, a daytime cover with an IR filter packed in a mil-spec hard case with batteries, a user guide, mounting hardware, and an instructional video. For more information, call (800) 910-2862 or visit www.atncorp.com.
